

Bioengineering 280A  
 Principles of Biomedical Imaging  
 Fall Quarter 2004  
 Lecture 6  
 Resolution, Discrete Fourier Transform

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

Topics

1. Recap of sampling.
2. Resolution
3. Discrete Fourier Transform

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

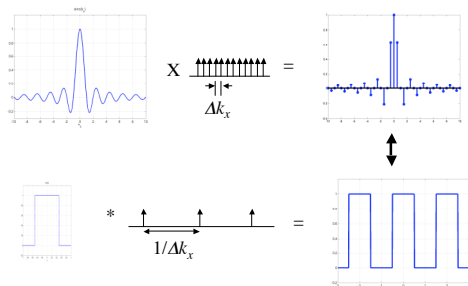

---

---

---

---

Fourier Sampling -- Inverse Transform

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Nyquist Condition

To avoid overlap,  $1/\Delta k_x > FOV$ , or equivalently,  $\Delta k_x < 1/FOV$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Intuitive view of Aliasing

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

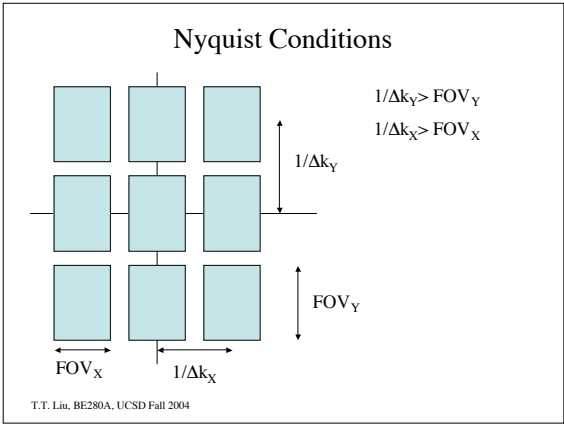

---

---

---

---

---

---

---

---

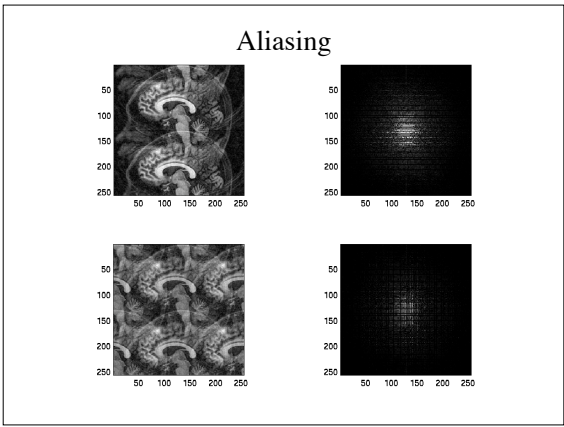

---

---

---

---

---

### Windowing

Windowing the data in Fourier space

$$G_W(k_x, k_y) = G(k_x, k_y)W(k_x, k_y)$$

Results in convolution of the object with the inverse transform of the window

$$g_W(x, y) = g(x, y) * w(x, y)$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

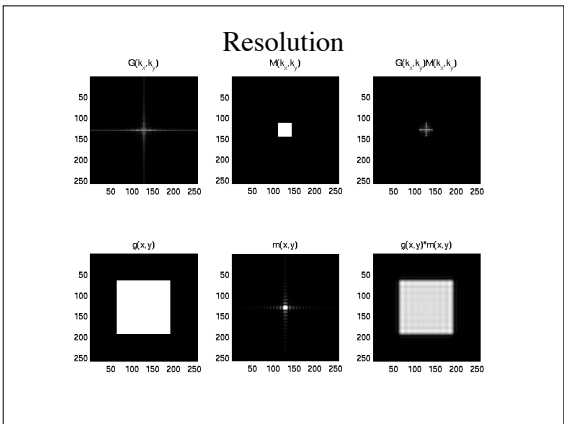

---

---

---

---

---

---

---

---

---

---

---

---

---

### Windowing Example

$$W(k_x, k_y) = \text{rect}\left(\frac{k_x}{W_{k_x}}\right) \text{rect}\left(\frac{k_y}{W_{k_y}}\right)$$

$$w(x, y) = F^{-1}\left[\text{rect}\left(\frac{k_x}{W_{k_x}}\right) \text{rect}\left(\frac{k_y}{W_{k_y}}\right)\right]$$

$$= W_{k_x} W_{k_y} \text{sinc}(W_{k_x} x) \text{sinc}(W_{k_y} y)$$

$$g_w(x, y) = g(x, y) * W_{k_x} W_{k_y} \text{sinc}(W_{k_x} x) \text{sinc}(W_{k_y} y)$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Windowing Example

$$g(x, y) = [\delta(x) + \delta(x-1)]\delta(y)$$

$$g_w(x, y) = [\delta(x) + \delta(x-1)]\delta(y) * W_{k_x} W_{k_y} \text{sinc}(W_{k_x} x) \text{sinc}(W_{k_y} y)$$

$$= W_{k_x} W_{k_y} ([\delta(x) + \delta(x-1)] * \text{sinc}(W_{k_x} x)) \text{sinc}(W_{k_y} y)$$

$$= W_{k_x} W_{k_y} (\text{sinc}(W_{k_x} x) + \text{sinc}(W_{k_x} (x-1))) \text{sinc}(W_{k_y} y)$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Effective Width

$$w_E = \frac{1}{w(0)} \int_{-\infty}^{\infty} w(x) dx$$

Example

$$w_E = \frac{1}{1} \int_{-\infty}^{\infty} \text{sinc}(W_{k_x} x) dx$$

$$= F[\text{sinc}(W_{k_x} x)] \Big|_{k_x=0}$$

$$= \frac{1}{W_{k_x}} \text{rect}\left(\frac{k_x}{W_{k_x}}\right) \Big|_{k_x=0}$$

$$= \frac{1}{W_{k_x}}$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Resolution and spatial frequency

With a window of width  $W_k$ , the highest spatial frequency is  $W_k/2$ .  
This corresponds to a spatial period of  $2/W_k$ .

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Sampling and Windowing

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

### Sampling and Windowing

Sampling and windowing the data in Fourier space

$$G_{SW}(k_x, k_y) = G(k_x, k_y) \frac{1}{\Delta k_x \Delta k_y} \text{comb}\left(\frac{k_x}{\Delta k_x}, \frac{k_y}{\Delta k_y}\right) \text{rect}\left(\frac{k_x}{W_k}, \frac{k_y}{W_k}\right)$$

Results in replication and convolution in object space.

$$g_{SW}(x, y) = W_k W_y g(x, y) * \text{comb}(\Delta k_x x, \Delta k_y y) * \text{sinc}(W_k x) \text{sinc}(W_y y)$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

## Discrete Fourier Transform

Idea: If we sample and window in the Fourier domain, we obtain a finite number of discrete Fourier samples. When we reconstruct the object, we should have the same number of pixels in our object.

Also, the windowing process, has band-limited the sampled Fourier transform, so this allows us to sample the replicated object at discrete points.

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

## 1D Sampling and Windowing

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

## Discrete Fourier Transform

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

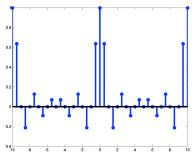

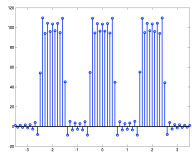

---

---

---

---

### Discrete Fourier Transform

$\longleftrightarrow$   
 $W_{k_x}$

$\longleftrightarrow$   
 $FOV$

$$N_x = \frac{W_{k_x}}{\Delta k_x}$$

$$N_x = \frac{FOV_{k_x}}{1/W_{k_x}} = \frac{W_{k_x}}{\Delta k_x}$$

Note that  $\frac{FOV_{k_x}}{N_x} = \frac{1}{W_{k_x}} = \delta_x$ , our measure for resolution.

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

---

---

### DFT

Sampling, windowing, and replication in Fourier space

$$G_{DFT}(k_x, k_y) = G(k_x, k_y) \frac{1}{\Delta k_x \Delta k_y} \text{comb}\left(\frac{k_x}{\Delta k_x}, \frac{k_y}{\Delta k_y}\right) \text{rect}\left(\frac{k_x}{W_{k_x}}, \frac{k_y}{W_{k_y}}\right) * \text{comb}\left(\frac{k_x}{W_{k_x}}, \frac{k_y}{W_{k_y}}\right)$$

Replication, convolving, sampling in object space

$$g_{DFT}(x, y) = W_{k_x} W_{k_y} g(x, y) * \text{comb}(\Delta k_x x, \Delta k_y y) * \text{sinc}(W_{k_x} x) \text{sinc}(W_{k_y} y) \\ \times W_{k_x} W_{k_y} \text{comb}(W_{k_x} x, W_{k_y} y)$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

---

---

### DFT

$$F[g_D(x)] = \int_0^{FOV} g_D(x) e^{-j2\pi m \Delta k_x x} dx \\ = \int_0^{FOV} \sum_{n=-\infty}^{\infty} g_D(n/W_x) \delta(x - n/W_x) e^{-j2\pi m \Delta k_x x} dx \\ = \sum_{n=0}^{N-1} \int_{-\infty}^{\infty} g_D(n/W_x) \delta(x - n/W_x) e^{-j2\pi m \Delta k_x x} dx \\ = \sum_{\substack{n=0 \\ N-1}}^{\substack{n=0 \\ N-1}} g_D(n/W_x) e^{-j2\pi m n \Delta k_x / W_x} \\ = \sum_{n=0}^{N-1} g_D[n] e^{-j2\pi m n / N}$$

This is what MATLAB computes when you use fft

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

---

---

## DFT Basis Functions

$$\text{DFT: } G[m] = \sum_{n=0}^{N-1} g[n] e^{-j2\pi mn/N}$$

Basis Functions are therefore:

$$b_m[n] = e^{j2\pi mn/N}$$

Are these orthonormal??

$$\text{Inverse DFT: } g[n] = \frac{1}{N} \sum_{m=0}^{N-1} G[m] e^{j2\pi mn/N}$$

T.T. Liu, BE280A, UCSD Fall 2004

---

---

---

---

---

---

---

---

## 2D DFT

$$\text{DFT: } G[r,s] = \sum_{m=0}^{N_1-1} \sum_{n=0}^{N_2-1} g[m,n] e^{-j2\pi(mr+sn)/N}$$

Basis Functions are therefore:

$$b_{r,s}[m,n] = e^{j2\pi(mr+sn)/N}$$

Are these orthonormal??

$$\text{Inverse DFT: } g[m,n] = \frac{1}{N^2} \sum_{r=0}^{N_1-1} \sum_{s=0}^{N_2-1} G[r,s] e^{j2\pi(mr+sn)/N}$$

In general, the number of points along each dimension need not be the same (e.g.  $N_1 \neq N_2$ ). How does this change the expressions?

T.T. Liu, BE280A, UCSD Fall 2004
