K-space

At each point in time, the received signal is the Fourier transform of the object

$$s(t) = M(k_x(t), k_y(t)) = F[m(x, y)]_{k_x(t), k_y(t)}$$

evaluated at the spatial frequencies:

$$k_x(t) = \frac{\gamma}{2\pi} \int_0^t G_x(\tau) d\tau$$

$$k_y(t) = \frac{\gamma}{2\pi} \int_0^t G_y(\tau) d\tau$$

Thus, the gradients control our position in k-space. The design of an MRI pulse sequence requires us to efficiently cover enough of k-space to form our image.

Thomas Liu, BE280A, UCSD, Fall 2005

Rectangle Function

$$\Pi(x) = \begin{cases} 0 & |x| > 1/2 \\ 1 & |x| \leq 1/2 \end{cases}$$

Also called $\text{rect}(x)$

$$\Pi(x,y) = \Pi(x)\Pi(y)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Kronecker Delta Function

$$\delta[n] = \begin{cases} 1 & \text{for } n = 0 \\ 0 & \text{otherwise} \end{cases}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Kronecker Delta Function

$$\delta[m,n] = \begin{cases} 1 & \text{for } m = 0, n = 0 \\ 0 & \text{otherwise} \end{cases}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Discrete Signal Expansion

$$g[n] = \sum_{k=-\infty}^{\infty} g[k]\delta[n-k]$$

$$g[m,n] = \sum_{k=-\infty}^{\infty} \sum_{l=-\infty}^{\infty} g[k,l]\delta[m-k,n-l]$$

Thomas Liu, BE280A, UCSD, Fall 2005

Dirac Delta Function

Notation :

$\delta(x)$ - 1D Dirac Delta Function

$\delta(x,y)$ or ${}^2\delta(x,y)$ - 2D Dirac Delta Function

$\delta(x,y,z)$ or ${}^3\delta(x,y,z)$ - 3D Dirac Delta Function

$\delta(\vec{r})$ - N Dimensional Dirac Delta Function

Thomas Liu, BE280A, UCSD, Fall 2005

1D Dirac Delta Function

$\delta(x) = 0$ when $x \neq 0$ and $\int_{-\infty}^{\infty} \delta(x) dx = 1$

Can interpret the integral as a limit of the integral of an ordinary function that is shrinking in width and growing in height, while maintaining a constant area. For example, we can use a shrinking rectangle function

such that $\int_{-\infty}^{\infty} \delta(x) dx = \lim_{\tau \rightarrow 0} \int_{-\infty}^{\infty} \tau^{-1} \Pi(x/\tau) dx$.

Thomas Liu, BE280A, UCSD, Fall 2005

2D Dirac Delta Function

$$\delta(x,y) = 0 \text{ when } x^2 + y^2 \neq 0 \text{ and } \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} \delta(x,y) dx dy = 1$$

where we can consider the limit of the integral of an ordinary 2D function that is shrinking in width but increasing in height while maintaining constant area.

$$\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} \delta(x,y) dx dy = \lim_{\tau \rightarrow 0} \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} \tau^{-2} \Pi(x/\tau, y/\tau) dx dy.$$

Useful fact : $\delta(x,y) = \delta(x)\delta(y)$

Thomas Liu, BE280A, UCSD, Fall 2005

Generalized Functions

Dirac delta functions are not ordinary functions that are defined by their value at each point. Instead, they are generalized functions that are defined by what they do underneath an integral.

The most important property of the Dirac delta is the sifting property

$\int_{-\infty}^{\infty} \delta(x - x_0) g(x) dx = g(x_0)$ where $g(x)$ is a smooth function. This sifting property can be understood by considering the limiting case

$$\lim_{\tau \rightarrow 0} \int_{-\infty}^{\infty} \tau^{-1} \Pi(x/\tau) g(x) dx = g(x_0)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Working with Dirac Delta Functions

What is $\delta(ax - b)$? What is $d\delta(x)/dx$?

How do we define generalized functions?

There are two main approaches:

1) Look at the limit of an integral with sequences.

2) Consider the behavior of the function when integrated with a *nice* test function. Two generalized functions $\delta_1(t)$ and $\delta_2(t)$ are

equivalent in the distributional sense when $\int_{-\infty}^{\infty} \delta_1(t)\phi(t)dt = \int_{-\infty}^{\infty} \delta_2(t)\phi(t)dt$

Example: $\delta(ax) = ??$

Thomas Liu, BE280A, UCSD, Fall 2005

Representation of 1D Function

From the sifting property, we can write a 1D function as

$g(x) = \int_{-\infty}^{\infty} g(\xi)\delta(x - \xi)d\xi$. To gain intuition, consider the approximation

$$g(x) \approx \sum_{n=-\infty}^{\infty} g(n\Delta x) \frac{1}{\Delta x} \Pi\left(\frac{x - n\Delta x}{\Delta x}\right)\Delta x.$$

Thomas Liu, BE280A, UCSD, Fall 2005

Representation of 2D Function

Similarly, we can write a 2D function as

$$g(x, y) = \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} g(\xi, \eta) \delta(x - \xi, y - \eta) d\xi d\eta.$$

To gain intuition, consider the approximation

$$g(x, y) \approx \sum_{m=-\infty}^{\infty} \sum_{n=-\infty}^{\infty} g(n\Delta x, m\Delta y) \frac{1}{\Delta x} \Pi\left(\frac{x - n\Delta x}{\Delta x}\right) \frac{1}{\Delta y} \Pi\left(\frac{y - m\Delta y}{\Delta y}\right) \Delta x \Delta y.$$

Thomas Liu, BE280A, UCSD, Fall 2005

Impulse Response

Intuition: the impulse response is the response of a system to an input of infinitesimal width and unit area.

Original
Image

Blurred Image

Since any input can be thought of as the weighted sum of impulses, a linear system is characterized by its impulse response(s).

Thomas Liu, BE280A, UCSD, Fall 2005

The Fourier Transform

The Fourier Transform (FT) is simply given by the basis coefficients

$$G(f) = \langle e^{j2\pi ft}, g(t) \rangle = \int_{-\infty}^{\infty} g(t) e^{-j2\pi ft} dt = F\{g(t)\}$$

The Inverse Fourier Transform is the continuous-time integral expansion for $g(t)$:

$$g(t) = \int_{-\infty}^{\infty} G(f) b_f(t) df = \int_{-\infty}^{\infty} G(f) e^{j2\pi ft} df = F^{-1}\{G(f)\}$$

This can also be written as an inner product in Fourier Space

$$g(t) = \langle e^{-j2\pi ft}, G(f) \rangle$$

Thomas Liu, BE280A, UCSD, Fall 2005

Units

Temporal Coordinates, e.g. t in seconds, f in cycles/second

$$G(f) = \langle e^{j2\pi ft}, g(t) \rangle = \int_{-\infty}^{\infty} g(t) e^{-j2\pi ft} dt \quad \text{Fourier Transform}$$

$$g(t) = \langle e^{-j2\pi ft}, G(f) \rangle = \int_{-\infty}^{\infty} G(f) e^{j2\pi ft} df \quad \text{Inverse Fourier Transform}$$

Spatial Coordinates, e.g. x in cm, k_x is spatial frequency in cycles/cm

$$G(k_x) = \langle e^{j2\pi k_x x}, g(x) \rangle = \int_{-\infty}^{\infty} g(x) e^{-j2\pi k_x x} dx \quad \text{Fourier Transform}$$

$$g(x) = \langle e^{-j2\pi k_x x}, G(k_x) \rangle = \int_{-\infty}^{\infty} G(k_x) e^{j2\pi k_x x} dk_x \quad \text{Inverse Fourier Transform}$$

Thomas Liu, BE280A, UCSD, Fall 2005

2D Fourier Transform

Fourier Transform

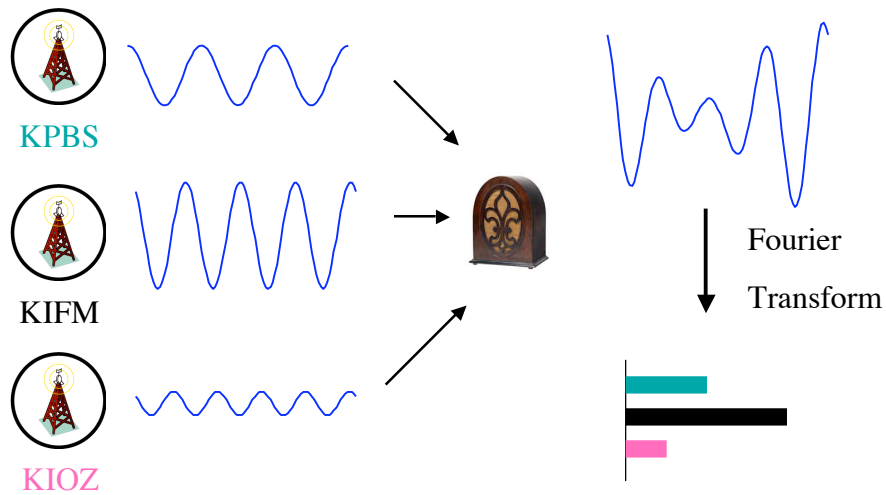

$$G(k_x, k_y) = F[g(x, y)] = \left\langle e^{j2\pi(k_x x + k_y y)}, g \right\rangle = \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} g(x, y) e^{-j2\pi(k_x x + k_y y)} dx dy$$

Inverse Fourier Transform

$$g(x, y) = \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} G(k_x, k_y) e^{j2\pi(k_x x + k_y y)} dk_x dk_y$$

Thomas Liu, BE280A, UCSD, Fall 2005

1D Fourier Transform

Thomas Liu, BE280A, UCSD, Fall 2005

Plane Waves

$$e^{j2\pi(k_x x + k_y y)} = \cos(2\pi(k_x x + k_y y)) + j \sin(2\pi(k_x x + k_y y))$$

Thomas Liu, BE280A, UCSD, Fall 2005

Figure 2.5 from Prince and Link

Thomas Liu, BE280A, UCSD, Fall 2005

Plane Waves

$$\Delta ABC \sim \Delta BDC$$

$$\frac{AC}{BC} = \frac{AB}{BD}$$

$$BD = AB \frac{BC}{AC} = \frac{\frac{1}{k_x} \frac{1}{k_y}}{\sqrt{\frac{1}{k_x^2} + \frac{1}{k_y^2}}} = \frac{1}{\sqrt{k_x^2 + k_y^2}}$$

$$\theta = \arctan\left(\frac{k_y}{k_x}\right)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Basic Properties

Linearity

$$F[ag(x,y) + bh(x,y)] = aG(k_x, k_y) + bH(k_x, k_y)$$

Scaling

$$F[g(ax, by)] = \frac{1}{|ab|} G\left(\frac{k_x}{a}, \frac{k_y}{b}\right)$$

Shift

$$F[g(x-a, y-b)] = G(k_x, k_y) e^{-j2\pi(k_x a + k_y b)}$$

Modulation

$$F[g(x,y) e^{j2\pi(xa + yb)}] = G(k_x - a, k_y - b)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Computing Transforms

$$F(\delta(x)) = \int_{-\infty}^{\infty} \delta(x) e^{-j2\pi k_x x} dx = 1$$

$$F(\delta(x - x_0)) = \int_{-\infty}^{\infty} \delta(x - x_0) e^{-j2\pi k_x x} dx = e^{-j2\pi k_x x_0}$$

$$\begin{aligned} F(\Pi(x)) &= \int_{-1/2}^{1/2} e^{-j2\pi k_x x} dx \\ &= \frac{e^{-j\pi k_x} - e^{j\pi k_x}}{-j2\pi k_x} \\ &= \frac{\sin(\pi k_x)}{\pi k_x} = \text{sinc}(k_x) \end{aligned}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Scaling Theorem

$$F\{g(ax)\} = \frac{1}{|a|} G\left(\frac{k_x}{a}\right)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Separable Functions

$g(x, y)$ is said to be a separable function if it can be written as $g(x, y) = g_X(x)g_Y(y)$
The Fourier Transform is then separable as well.

$$\begin{aligned} G(k_x, k_y) &= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} g(x, y) e^{-j2\pi(k_x x + k_y y)} dx dy \\ &= \int_{-\infty}^{\infty} g_X(x) e^{-j2\pi k_x x} dx \int_{-\infty}^{\infty} g_Y(y) e^{-j2\pi k_y y} dy \\ &= \bar{G}_X(k_x) \bar{G}_Y(k_y) \end{aligned}$$

Example

$$\begin{aligned} g(x, y) &= \Pi(x)\Pi(y) \\ G(k_x, k_y) &= \text{sinc}(k_x)\text{sinc}(k_y) \end{aligned}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Example (sinc/rect)

Example

$$\begin{aligned} g(x, y) &= \Pi(x)\Pi(y) \\ G(k_x, k_y) &= \text{sinc}(k_x)\text{sinc}(k_y) \end{aligned}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Example (sinc/rect)

1

Computing Transforms

$$F(1) = \int_{-\infty}^{\infty} e^{-j2\pi k_x x} dx = ???$$

Define $h(k_x) = \int_{-\infty}^{\infty} e^{-j2\pi k_x x} dx$ and see what it does under an integral.

$$\begin{aligned} \int_{-\infty}^{\infty} G(k_x) h(k_x) dk_x &= \int_{-\infty}^{\infty} G(k_x) \int_{-\infty}^{\infty} e^{-j2\pi k_x x} dx dk_x \\ &= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} G(k_x) e^{-j2\pi k_x x} dk_x dx \\ &= \int_{-\infty}^{\infty} g(-x) dx \\ &= G(0) \end{aligned}$$

Therefore, $F(1) = \int_{-\infty}^{\infty} e^{-j2\pi k_x x} dx = \delta(k_x)$

Linearity

The Fourier Transform is linear.

$$F\{ag(x) + bh(x)\} = aG(k_x) + bH(k_x)$$

$$F[ag(x, y) + bh(x, y)] = aG(k_x, k_y) + bH(k_x, k_y)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Computing Transforms

Similarly,

$$F\{e^{j2\pi k_0 x}\} = \delta(k_x - k_0)$$

$$F\{\cos 2\pi k_0 x\} = \frac{1}{2}(\delta(k_x - k_0) + \delta(k_x + k_0))$$

$$F\{\sin 2\pi k_0 x\} = \frac{1}{2j}(\delta(k_x - k_0) - \delta(k_x + k_0))$$

Thomas Liu, BE280A, UCSD, Fall 2005

Examples

$$g(x, y) = \delta(x, y) = \delta(x)\delta(y)$$
$$G(k_x, k_y) = 1$$

$$g(x, y) = \delta(x)$$
$$G(k_x, k_y) = \delta(k_y) \text{ !!!}$$

Thomas Liu, BE280A, UCSD, Fall 2005

Examples

$$g(x, y) = 1 + e^{-j2\pi ax}$$
$$G(k_x, k_y) = \delta(k_x, k_y) + \delta(k_x + a)\delta(k_y)$$

$$g(x, y) = 1 + e^{j2\pi ay}$$
$$G(k_x, k_y) = \delta(k_x, k_y) + \delta(k_x)\delta(k_y - a)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Examples

$$g(x, y) = \cos(2\pi(ax + by))$$

$$G(k_x, k_y) = \frac{1}{2}\delta(k_x - a)\delta(k_y - b) + \frac{1}{2}\delta(k_x + a)\delta(k_y + b)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Examples

$$G(k_x, k_y) = \delta(k_x, k_y) + \delta(k_x + c)\delta(k_y) + \delta(k_x)\delta(k_y - d) + \frac{1}{2}\delta(k_x - a)\delta(k_y - b) + \frac{1}{2}\delta(k_x + a)\delta(k_y + b)$$

$$g(x, y) = ???$$

Thomas Liu, BE280A, UCSD, Fall 2005

Duality

Note the similarity between these two transforms

$$\begin{aligned} F\{e^{j2\pi ax}\} &= \delta(k_x - a) \\ F\{\delta(x - a)\} &= e^{-j2\pi k_x a} \end{aligned}$$

These are specific cases of duality

$$F\{G(x)\} = g(-k_x)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Application of Duality

$$F\{\text{sinc}(x)\} = \int_{-\infty}^{\infty} \frac{\sin \pi x}{\pi x} e^{-j2\pi k_x x} dx = ??$$

Recall that $F\{\Pi(x)\} = \text{sinc}(k_x)$.

Therefore from duality, $F\{\text{sinc}(x)\} = \Pi(-k_x) = \Pi(k_x)$

Thomas Liu, BE280A, UCSD, Fall 2005

Shift Theorem

$$F\{g(x - a)\} = G(k_x)e^{-j2\pi ak_x}$$

Shifting the function doesn't change its spectral content, so the magnitude of the transform is unchanged.

Each frequency component is shifted by a . This corresponds to a relative phase shift of

$$-2\pi a / (\text{spatial period}) = -2\pi ak_x$$

For example, consider $\exp(j2\pi k_x x)$. Shifting this by a yields $\exp(j2\pi k_x (x - a)) = \exp(j2\pi k_x x) \exp(-j2\pi ak_x)$

Thomas Liu, BE280A, UCSD, Fall 2005

Modulation

$$F[g(x)e^{j2\pi k_0 x}] = G(k_x) * \delta(k_x - k_0) = G(k_x - k_0)$$

$$F[g(x)\cos(2\pi k_0 x)] = \frac{1}{2}G(k_x - k_0) + \frac{1}{2}G(k_x + k_0)$$

$$F[g(x)\sin(2\pi k_0 x)] = \frac{1}{2j}G(k_x - k_0) - \frac{1}{2j}G(k_x + k_0)$$

Thomas Liu, BE280A, UCSD, Fall 2005

Example

Amplitude Modulation (e.g. AM Radio)

Thomas Liu, BE280A, UCSD, Fall 2005

Modulation Example

Thomas Liu, BE280A, UCSD, Fall 2005
